

## Mission Statement

The goal of this project is to create a console application that allows users to search for movies by name, director, or release year. Users can also add reviews to movies. The application will read movie data from a CSV file and store it in a collection of Film objects. The application will also store reviews in a collection of Review objects. The application will have a menu system that allows users to select from the following options:

1. Create review
2. Search movie by name or part of the name
3. List of films by a 'director'
4. List of films of a certain 'release\_year'
