Our mission is to successfully develop and deliver a Netflix Movie Search Engine that meets all functional requirements and user expectations.

By the end of the project, we aim to have a fully operational application that allows users to:

- Search for movies by name, director, or release year.
- Add new movies and submit reviews.
- Retrieve and display relevant movie details efficiently.

Our primary focus is on code quality, performance optimization, and user experience. This project will strengthen our skills in Java, Maven, Picocli, JUnit, and OpenCSV, ensuring we complete a well-structured, maintainable, and user-friendly software product.
